Max-Business-System for the Next Generation of Businesses

v1.0
Built by GotBots.si

Let's make more money, cut costs, simplify your business, and free up your time.

Our Apex product | **8 systems in one** | **Enterprise Features at SMB Pricing**

A business system that teaches you how to make more money and improve your bottom line.

One system for your whole business. A full CRM and ERP is built in, with complete knowledge bases and databases, plus our cohort of digital workers.* That is **8 systems in one**, for the price of one: ERP, CRM, marketing, AI agents, quoting (CPQ), quality, reliability and maintenance (CMMS), and warehouse management (WMS).

How we grow the top line

- **Faster quotes.** Quotes are drafted from your own rules and price book, so they go out the same day, not days later.
- **Follow-ups that don't slip.** Every open quote has a next step and an owner.
- **Quiet customers flagged.** Digital workers spot accounts that have gone quiet or have room to grow.

How we grow the bottom line

- **Same-day invoicing.** The invoice goes out when the work ships, because it is the same system.
- **Overdue accounts get a nudge** without you having to ask.
- **Less scrap and rework.** Quality checks sit next to your orders, so problems get caught on the floor, not at the customer.

How we save money

- **One system, one bill.** It replaces a stack of separate software subscriptions.
- **Routine work comes off your team.** Re-keying, report-chasing and status calls move to digital workers, so you grow without adding staff.
- **What your best people know stays** in your own knowledge base, even after they retire.

TWO BUTTONS. THAT IS THE WHOLE INTERFACE.

Ask MS Copilot

Your second brain across the whole business. Ask it anything about your cash, orders or customers and it answers from your own records.

Microsoft Copilot is live today, inside the Microsoft 365 your team already uses.

Digital Helper

Your teacher, helper and early-warning system. It knows how you work, shows people how to do things, handles the routine work, and flags trends before they become problems.

Digital Teammates propose. Humans decide.

The digital workers draft. A named person on your team approves before anything goes out.

ILLUSTRATIVE EXAMPLE (FICTIONAL)

A Virginia rug maker sends the customer's design images to the Digital Helper. It drafts the quote, the work order, the bill of materials, the routings and the tufting machine instructions, with the whole job fully costed. A person on the rug maker's team reviews and approves before anything goes to the customer.

$3,999/month | **Unlimited seats** | **No implementation fee** | **12-month minimum** | **90-day implementation**

Sales and Marketing up in 2 weeks; full system in 90 days.

We run it in parallel with your current system, so work moves over with no downtime.

Start with twenty minutes.

Bring one number you don't like (quote turnaround, days to get paid, scrap rate) and we will show you where it moves. Email **sales@chilesand.co**

*The client pays the open-source ERP and CRM subscription directly when the software is implemented.
