Max-Business-System for the Next Generation of Businesses

v1.0
Built by GotBots.si

Let's make more money, cut costs, simplify your business, and free up your time.

Our Apex product | **8 systems in one** | **Enterprise Features at SMB Pricing**

A business system that teaches you how to make more money and improve your bottom line.

Max-Business-System is one system for your whole business, with one front door and a morning briefing instead of a report hunt. A full CRM and ERP is built in, with complete knowledge bases and databases, plus our cohort of digital workers.* That is **8 systems in one**, for the price of one: ERP, CRM, marketing, AI agents, quoting (CPQ), quality, reliability and maintenance (CMMS), and warehouse management (WMS).

THE PROBLEM

Your cash leaks out in a dozen quiet places.

- **Too many software bills.** Separate systems for accounting, customers, quoting, quality, maintenance and scheduling. Each one small; together, a mortgage payment.
- **The same data typed in twice.** Three chances to get it wrong, and nobody owns the right answer.
- **Quotes that go out late.** The customer who gets a number on Tuesday usually wins the job. Yours goes out Thursday.
- **Invoices paid slowly, and no clear view until month end.** By the time the report lands, the month you could have fixed is over.

WHAT YOU GET

How we grow the top line

- **Faster quotes.** Quotes are drafted from your own rules and price book, so they go out the same day, not days later.
- **Follow-ups that don't slip.** Every open quote has a next step and an owner.
- **Quiet customers flagged.** Digital workers spot accounts that have gone quiet or have room to grow.

How we grow the bottom line

- **Same-day invoicing.** The invoice goes out when the work ships, because it is the same system.
- **Overdue accounts get a nudge** without you having to ask.
- **Less scrap and rework.** Quality checks sit next to your orders, so problems get caught on the floor, not at the customer.

How we save money

- **One system, one bill.** It replaces a stack of separate software subscriptions.
- **Routine work comes off your team.** Re-keying, report-chasing and status calls move to digital workers, so you grow without adding staff.
- **What your best people know stays** in your own knowledge base, even after they retire.

TWO BUTTONS. THAT IS THE WHOLE INTERFACE.

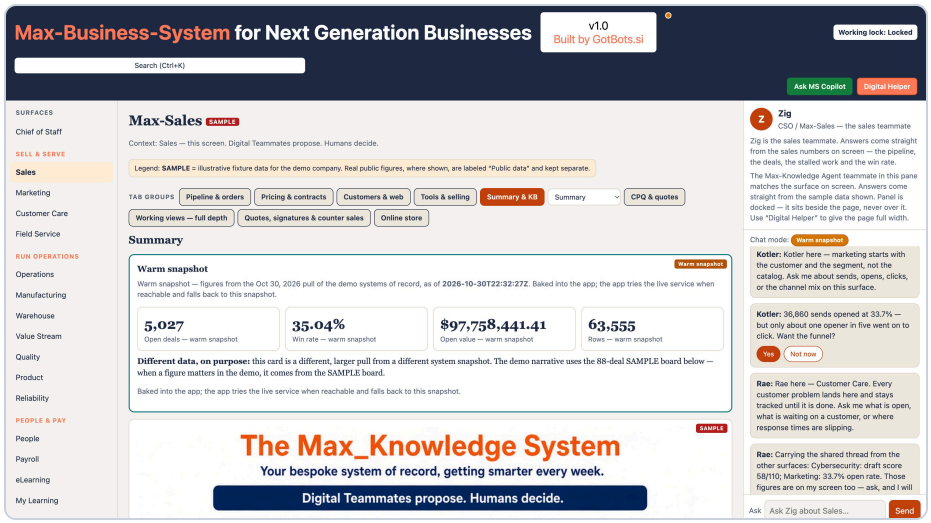

Ask MS Copilot

Your second brain across the whole business. Ask it anything about your cash, orders or customers and it answers from your own records.

Microsoft Copilot is live today, inside the Microsoft 365 your team already uses.

Digital Helper

Your teacher, helper and early-warning system. It knows how you work, shows people how to do things, handles the routine work, and flags trends before they become problems.

The finished Max-Business-System, shown with sample data for a demo company. Payroll and Field Service appear in the menu with sample data; they are on the roadmap, not live.

Digital Teammates propose. Humans decide.

The digital workers draft. A named person on your team approves before anything goes out: no quote, invoice, order or customer email moves on its own.

IN THE SYSTEM TODAY

- **Run the day:** Chief of Staff, with your morning briefing.
- **Sell and serve:** Sales, Marketing and Customer Care.
- **Make and ship:** Operations, Manufacturing, Warehouse, Value Stream, Quality, Product and Reliability.
- **People and learning:** People, eLearning and My Learning.

On the roadmap: Payroll, Field Service and dispatch, Fleet, Rental, an approvals inbox, and email marketing campaigns. You may see some of them in the menu with sample data. We will tell you plainly when each one goes live, and we never call a sample screen live.

ILLUSTRATIVE EXAMPLE (FICTIONAL)

A Virginia rug maker sends the customer's design images to the Digital Helper. It drafts the quote, the work order, the bill of materials, the routings and the tufting machine instructions, with the whole job fully costed. A person on the rug maker's team reviews and approves before anything goes to the customer.

HOW WE START

1. **A free 20-minute walkthrough** on your own question.
2. **Sales and Marketing up in 2 weeks.** We do the setup.
3. **Full system in 90 days**, on your real work.

$3,999/month | **Unlimited seats** | **No implementation fee** | **12-month minimum** | **90-day implementation**

Sales and Marketing up in 2 weeks; full system in 90 days.

We run it in parallel with your current system, so work moves over with no downtime.

Start with twenty minutes.

Bring one number you don't like (quote turnaround, days to get paid, scrap rate) and we will show you where it moves. Email **sales@chilesand.co**

*The client pays the open-source ERP and CRM subscription directly when the software is implemented.
